1 General Description

Model 2559, the newest member of AMEL's compact series, allows for working both in potentiostatic and galvanostatic modes varying from 1nA to 100mA Full Scale over 9 different current ranges. It is recommended for ultra sensitive measurements and, thanks to its portability, for on the field applications. The instrument can be powered using both 230V power supply (singularly or with Model 2560) or standalone 12V battery. This feature enables for easy operations in Faraday cages or isolated environments. The aluminium container delivers both electromagnetic shielding and sturdiness. Model 2559 has been designed to be used individually or transformed into a mutlipotentiostat using Model 2560 8-channel power supply. It can be further associated to Frequency Response Analyzer, Model 2700, to perform impedance measurements. The instrument connects to your personal computer via USB and it is controlled by the new VApeak software allowing for electrochemical (batteries, electrodes, corrosion and more) and quantitative electroanalytical measurements both as single or multipotentiostat.

2 Metrological Properties

2.1 Counter Electrode

Voltage Output	$\pm 10V$ max
Current Output	$\pm 100mA$ max
Slew Rate	0,01mV/s to 10V/s
Protection	Thermal, overload and short-circuit

2.2 Working Electrode

Current Measure	From 1nA to 100mA Full Scale in 9 ranges
Current Resolution	From 1pA at 1nA Full Scale to 10 μ A at 100mA Full Scale
Measuring Accuracy	< 5% of Full Scale in 1nA to 1 μ A ranges < 0,25% of Full Scale in 10 μ A to 100mA ranges

2.3 Reference Electrode

Input Impedance	$> 1T\Omega$
Input Capacitance	< 20pF (1m cable)
Biassing Current	< 10pA at 25°C
Common Mode Rejection	> 60dB full frequency response
Voltage Range	$\pm 10V$ max

PRODUCT CODE:

2.4 Polarization Capability

Voltage	± 10V max
Current	± 100mA max
Voltage Resolution	0,1mV
Current Resolution	10pA
Accuracy	± 0,2% & 0,1% (conversion at Full Scale)

2.5 IR Compensation

Positive Feedback Range 2Ω to 100MΩ (depending on current range)

2.6 Response Time

Potentiostatic Rise Time < 1µs resistive load (1000Ω)

Galvanostatic Rise Time < 17µs resistive load (1000Ω)

2.7 Meters and Interfaces

A/D Converter	16 BIT
D/A Converter	16 BIT
Temperature Meter	0 to +100°C with PT1000 probe (0,1°C resolution and ± 0,2°C accuracy)
Sampling Rate	200µs

2.8 Digital Interface

Connection	USB with full instrument control (baud rate 57600 – N – 8 – 1)
Memory	EEPROM 64kB – SRAM 32kB
Port Output	8 external accessories
I/O port	8 optional

2.9 Cell Connections

Cables 3 cables connector to 4mm banana plug

2.10 Power Supply and Dimensions

Voltage Mains	12 to 24V AC/DC 50/60Hz
External Power	Model 2560 8-channel Power Supply
	Single Power Supply (provided if Model 2560 is not present)
Power Consumption	10VA max
Dimensions (L x W x H)	200 x 215 x 80mm
Weight	1,5kg

3 Implemented Electrochemical Techniques

3.1 Detection

- AD Amperometric Detection
PD Potentiometric Detection
DSA Double Step Amperometry
DSV Double Step Potentiometry
PAD Pulsed Amperometric Detection

3.2 Voltammetric

- LSV Linear Scan Voltammetry
CYV Cyclic Voltammetry
GLV Galvanostatic Linear Voltammetry
GCV Galvanostatic Cyclic Voltammetry
SWV Square Wave Voltammetry
NPV Normal Pulse Voltammetry
ACV Alternating Current Voltammetry
DPV Differential Pulse Voltammetry
DNV Differential Normal Pulse Voltammetry
DAV Differential Alternate Pulse Voltammetry

3.3 Stripping

- LSS Linear Scan Stripping
ACS Alternate Current Stripping
SWS Square Wave Stripping
DAS Differential Stripping
DPS Differential Pulse Stripping
DNS Differential Normal Pulse Stripping
PSA Potentiometric Stripping Analysis
CCSA Constant Current Stripping Analysis

4 Spare Parts

- 191/SUPS24 Power supply for single unit
191/USB USB cable
191/3M4 Set of WE, RE and CE multicable
191/C3 Set of 3 crocodile clips for WE, RE and CE 4mm banana plugs
